Web3 Alias: **Aphilos**

SUMMARY

Technical Product Manager and engineer with **23 years of software experience**, including **11 years of algorithm development for the U.S. Department of Defense** and **5 years building decentralized applications on EVM chains**.

Strong background in system design, full-stack engineering, product specification, and translating complex technical concepts into clear product requirements.

Skilled in collaborating with protocol engineers, writing precise documentation, and building developer-centric products. Experience spans Solidity, EVM internals, L1/L2 architecture patterns, Python, Node.js, TypeScript, React/Next.js, and decentralized identity/verification systems.

Looking to contribute to Arbitrum's protocol roadmap through rigorous thinking, clear specs, and technical product leadership.

CORE SKILLS

Technical:

Solidity • EVM • L2/L1 architecture • Python • Node.js • TypeScript • React/Next.js • Smart contract design • Data modeling • Distributed systems

Product:

Technical product specifications • Feature prioritization • Requirements gathering • Roadmapping • Technical documentation • Cross-functional collaboration • Developer onboarding

System Experience:

Consensus patterns • Cryptographic primitives (practical) • Rollup fundamentals • Decentralized identity • Protocol-level UX • Secure systems design

Other:

Algorithm design • UX flows • CI/CD familiarity • Business development (17 years) • Remote async collaboration

RELEVANT EXPERIENCE

Technical Product Manager / Full-Stack Engineer (Independent)

2013–2025 — Remote

Worked at the intersection of product, engineering, and decentralized protocol design.

- Designed technical specifications and product architecture for decentralized systems including **Pharo** (decentralized insurance) and **SiPPP** (photo provenance protocol).
- Built smart contracts, APIs, and full-stack code for multiple EVM-based projects using Solidity, TypeScript, Node.js, and React/Next.js.
- Wrote clear technical documentation, user flows, and feature specifications for engineering teams.
- Designed and shipped end-to-end systems involving identity, verification, cryptographic signatures, and on-chain/off-chain interaction.
- Collaborated with engineers on implementation details, trade-offs, and protocol UX considerations.
- Built tooling and onboarding experiences for developers integrating with Web3 systems.

Selected Technical Projects

Pharo (Decentralized Insurance Protocol)

- Designed product architecture and contract interactions
- Wrote specifications for claims logic and staking flows

SiPPP (Simple Photo Provenance Protocol)

- Built decentralized verification protocol
- Designed cryptographic signature flow and API architecture

SideventS (Event Management Protocol)

- Designed event/state transitions and smart contract interface
- Wrote product specs and full UX → engineering handoff

NWTT (Mining Supply Chain)

- Designed data integrity architecture
- Wrote requirements and contract interfaces for supply chain state tracking

Consulting Roles

Lead AI Architect & Developer — Spring Global

Built system architecture, pipelines, and backend systems in Python.

AI Developer — Picnic

Implemented backend automation and data pipelines.

Product Manager / Business Development — Optify

Owned product roadmap, technical specs, and partner integrations.

Product Development & Community — Lobby3

Defined product requirements and coordinated engineering.

Earlier Experience

U.S. Department of Defense — Algorithm Developer

2002–2013

- Designed mission-critical algorithms and high-reliability software systems
 - Worked with strict documentation standards and technical review processes
 - Collaborated with research and engineering teams on complex computational problems
 - Gained deep experience with precision, correctness, and engineering discipline
-

COMMUNITY

Founder — Data Community DC (2012–Present)

Built one of the largest data-science grassroots organizations in the U.S.
Experienced at leading technical communities and facilitating complex discussions.

EDUCATION

Bachelor of Engineering — Engineering Physics (2001)
