Portfolio: <https://seanmgonzalez.github.io>

SUMMARY

Technical Product Manager and full-stack engineer with 23 years of software experience, including 11 years as an algorithm developer for the U.S. Department of Defense and 5 years building decentralized applications.

Experienced in designing and shipping complex systems across Web3, AI, and data infrastructure. Strong at translating technical concepts into product strategy, collaborating with engineers, and delivering products from concept through production.

Recent work focuses on developer platforms, decentralized protocols, AI-driven systems, and ecosystem-driven business development.

CORE SKILLS

Product & Strategy:

Technical product management, roadmap planning, feature prioritization, product-market fit, developer experience, go-to-market strategy

Engineering:

Python, TypeScript, JavaScript, Solidity, Node.js, React, Next.js, API design, distributed systems

Web3 & Systems:

EVM, smart contracts, decentralized identity, governance systems, protocol architecture, cryptographic workflows

AI & Data:

Data pipelines, predictive systems, AI infrastructure, ETL workflows

Tools:

Git, GitHub, GitHub Actions, Railway, Supabase, Hardhat, Foundry, Notion, Jira

EXPERIENCE

Raid Guild — Member & Business Development Lead

2025 – Present · Remote

- Closed multiple client contracts through ecosystem-driven business development
 - Leading cohort-based sponsorship strategy connecting protocols with high-agency developers
 - Designing “Cohorts-as-a-Service” model for product feedback, adoption, and developer engagement
 - Building pipeline across Web3 and AI companies for partnerships and growth initiatives
 - Translating partner needs into product experiments and developer workflows
-

General Influence LLC — Founder & Technical Product Lead

2015 – Present · Remote

Technical consulting across AI, Web3, and product systems.

- Delivered AI infrastructure and predictive systems for enterprise clients including Spring Global and Picnic
 - Designed and built decentralized applications, APIs, and developer tooling
 - Led product strategy, system architecture, and UX across multiple projects
 - Managed QA, testing, and deployment for production systems
 - Owned business development, client relationships, and delivery end-to-end
-

Product Lead — Ixian (CLE Platform)

2026 · Remote

- Designed and built a Continuing Legal Education (CLE) platform for Web3 legal professionals
- Defined product architecture for credentialing, compliance, and gated access flows
- Coordinated requirements across legal, engineering, and product stakeholders
- Delivered a system bridging regulated education and Web3 identity

Cofounder & Architect — SiPPP (Research Prototype)

2023 · Remote

- Designed a decentralized photo provenance protocol using cryptographic signatures
- Built mobile prototype to test verification workflows
- Identified limitations in mobile wallet UX and documented constraints
- Produced architectural documentation and technical research

Director — Lobby3 / Creator of DeVox

2021 – 2023 · Remote

- Founded DeVox, a decentralized civic engagement and governance protocol
- Designed protocol architecture including voting and participation mechanisms
- Led product direction, community strategy, and cross-functional coordination
- Authored public writing on decentralized governance systems

Cofounder & Lead Engineer — Pharo

2021 – 2022 · Remote

- Designed core decentralized insurance algorithm and system architecture
- Built smart contracts, APIs, backend services, and frontend UX
- Wrote product specifications, technical documentation, and system flows
- Led QA and integration across full-stack components

CTO — Optify

2019 – 2020 · Remote

- Led engineering, product roadmap, and technical strategy
 - Managed full-stack development and platform architecture
 - Improved system reliability and product performance
 - Coordinated cross-functional product and engineering teams
-

AI Architect & Developer — Spring Global

Consulting Engagement

- Built AI-driven “Command Center” predicting CPG stock rates for field operations
 - Designed predictive models and backend systems for real-time decision support
-

AI Developer — Picnic

- Built data pipelines for ingesting and analyzing public information
 - Developed risk prediction systems for enterprise clients
-

Algorithm Developer — U.S. Department of Defense

2002 – 2013

- Designed and tested mission-critical targeting and tracking algorithms
 - Performed simulation QA and validation for high-reliability systems
 - Produced detailed documentation and reproducible testing frameworks
-

COMMUNITY & LEADERSHIP

Founder — Data Community DC

2012 – Present

- Built one of the largest grassroots data-science communities in the U.S.
 - Organized events, partnerships, and technical programming
 - Connected developers, data scientists, and companies
-

EDUCATION

Bachelor of Engineering — Engineering Physics (2001)

ADDITIONAL

- 23 years software engineering experience
- 17 years business development experience
- 5 years Web3 / decentralized systems
- Strong experience in remote, async, cross-functional teams
